SBI EVERSPIN Co., Ltd.

SBI EVERSPIN Completes the First Surveillance Audit
of ISMS (Information Security Management System)
~ Ongoing Efforts Toward Providing Highly Reliable and Secure Services ~

SBI EVERSPIN Co., Ltd. (Headquarters: Minato-ku, Tokyo; Representative Director and President: Jamyung Yoon), a consolidated subsidiary of SBI Holdings, Inc. (Head Office: Minato-ku, Tokyo; Representative Director, Chairman, President & CEO: Yoshitaka Kitao), and a provider of AI-based cybersecurity solutions, hereby announces that, with respect to its ISMS (ISO/IEC 27001:2022+Amd 1:2024 and JIS Q 27001:2025) certification, the first surveillance audit conducted in May 2026 has been successfully completed, confirming that the system is operating effectively.

Continuation of ISMS operation and positioning of the surveillance audit

The ISMS surveillance audit is conducted by a third-party certification body to verify that the Information Security Management System continues to be properly operated and maintained even after certification has been obtained.

The Company does not treat security measures as merely maintaining certification, but rather it is committed to continuous improvement and strengthening of operations in response to the ever-changing threat landscape.

As a result of these ongoing efforts, the effectiveness of its operational framework and initiatives was confirmed in this audit as well.

Through these initiatives, the Company has continued to provide highly reliable and secure services.

Future Initiatives

The Company will continue to strengthen its security measures and further enhance its operational framework in response to cyber threats that are becoming increasingly sophisticated and diverse.

In addition to the continuous improvement of its ISMS, the Company is working toward obtaining BCMS (Business Continuity Management System) certification to strengthen its business continuity management. The Company will also consider, from a medium- to long-term perspective, its response to international security requirements such as SOC 2, with the aim of further improving reliability and security.

Through these initiatives, the Company will further strengthen its business continuity framework and establish an environment in which customers can use its services with greater peace of mind, while continuing to create value on an ongoing basis.
